@app.route('/')
def home():
    return render_template("home.html")

  <h1 style="text-align: center;">About us</h1>
  <p style="font-family: Verdana, Geneva, Tahoma, sans-serif;font-
size: large;">Retailers worldwide have started deploying smart service
innovations in their stores to regain market
  share lost to online competitors. Against this backdrop, this p
aper focuses on the design of product
  recommendation systems for fashion stores. Our research particu
larly aims at answering the issues of
  whether and to what extent (i) the sensing capabilities of smar
t fashion retail environments and (ii) the
  integration of contextual information can improve the quality o
f such recommendations. To this end,
  we consider smart fitting rooms with the ability to detect prod
ucts and customers as a showcase; a
  transaction dataset from a leading German fashion retailer; and
  contextual information about the time
  of purchase, the store type, and the weather conditions. Our pr
eliminary analyses indicate that sensor
  information regarding garment and user identification, as well
as further context data help to improve
  product recommendations in fashion stores.
